

Want to create a connected patient experience?

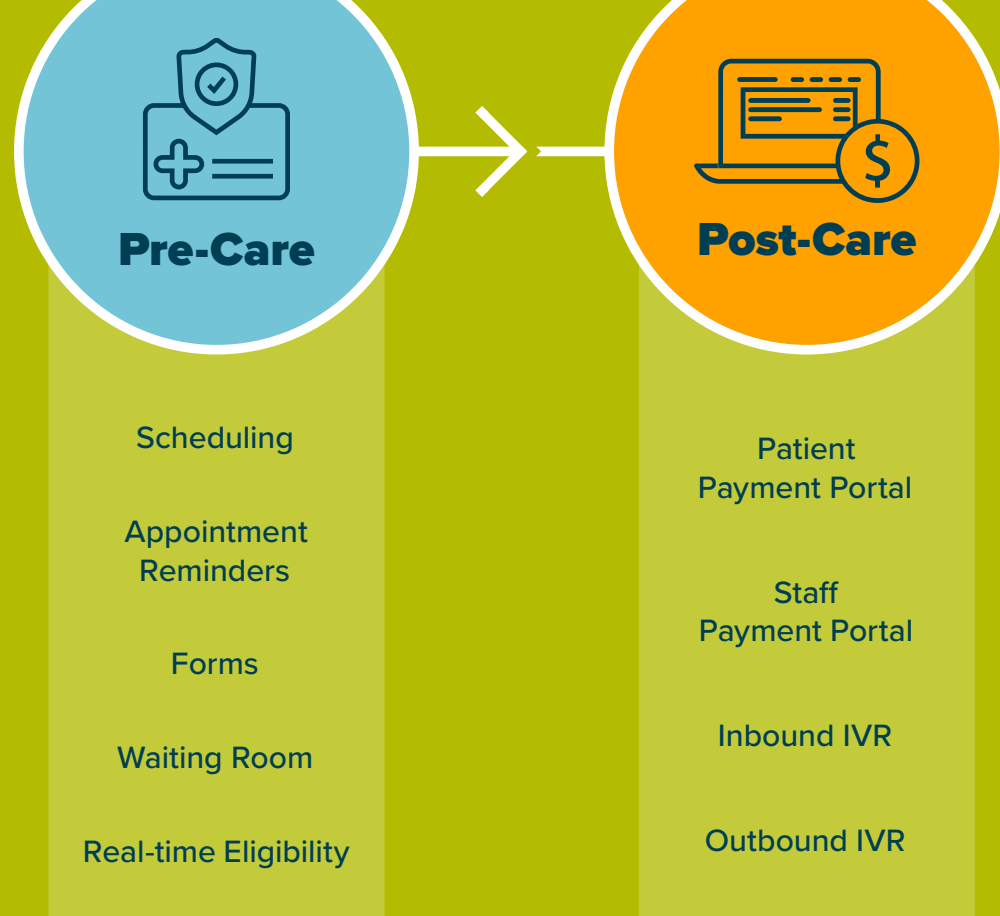

Align with your EHR

A connected patient experience requires the backbone that your EHR system provides.

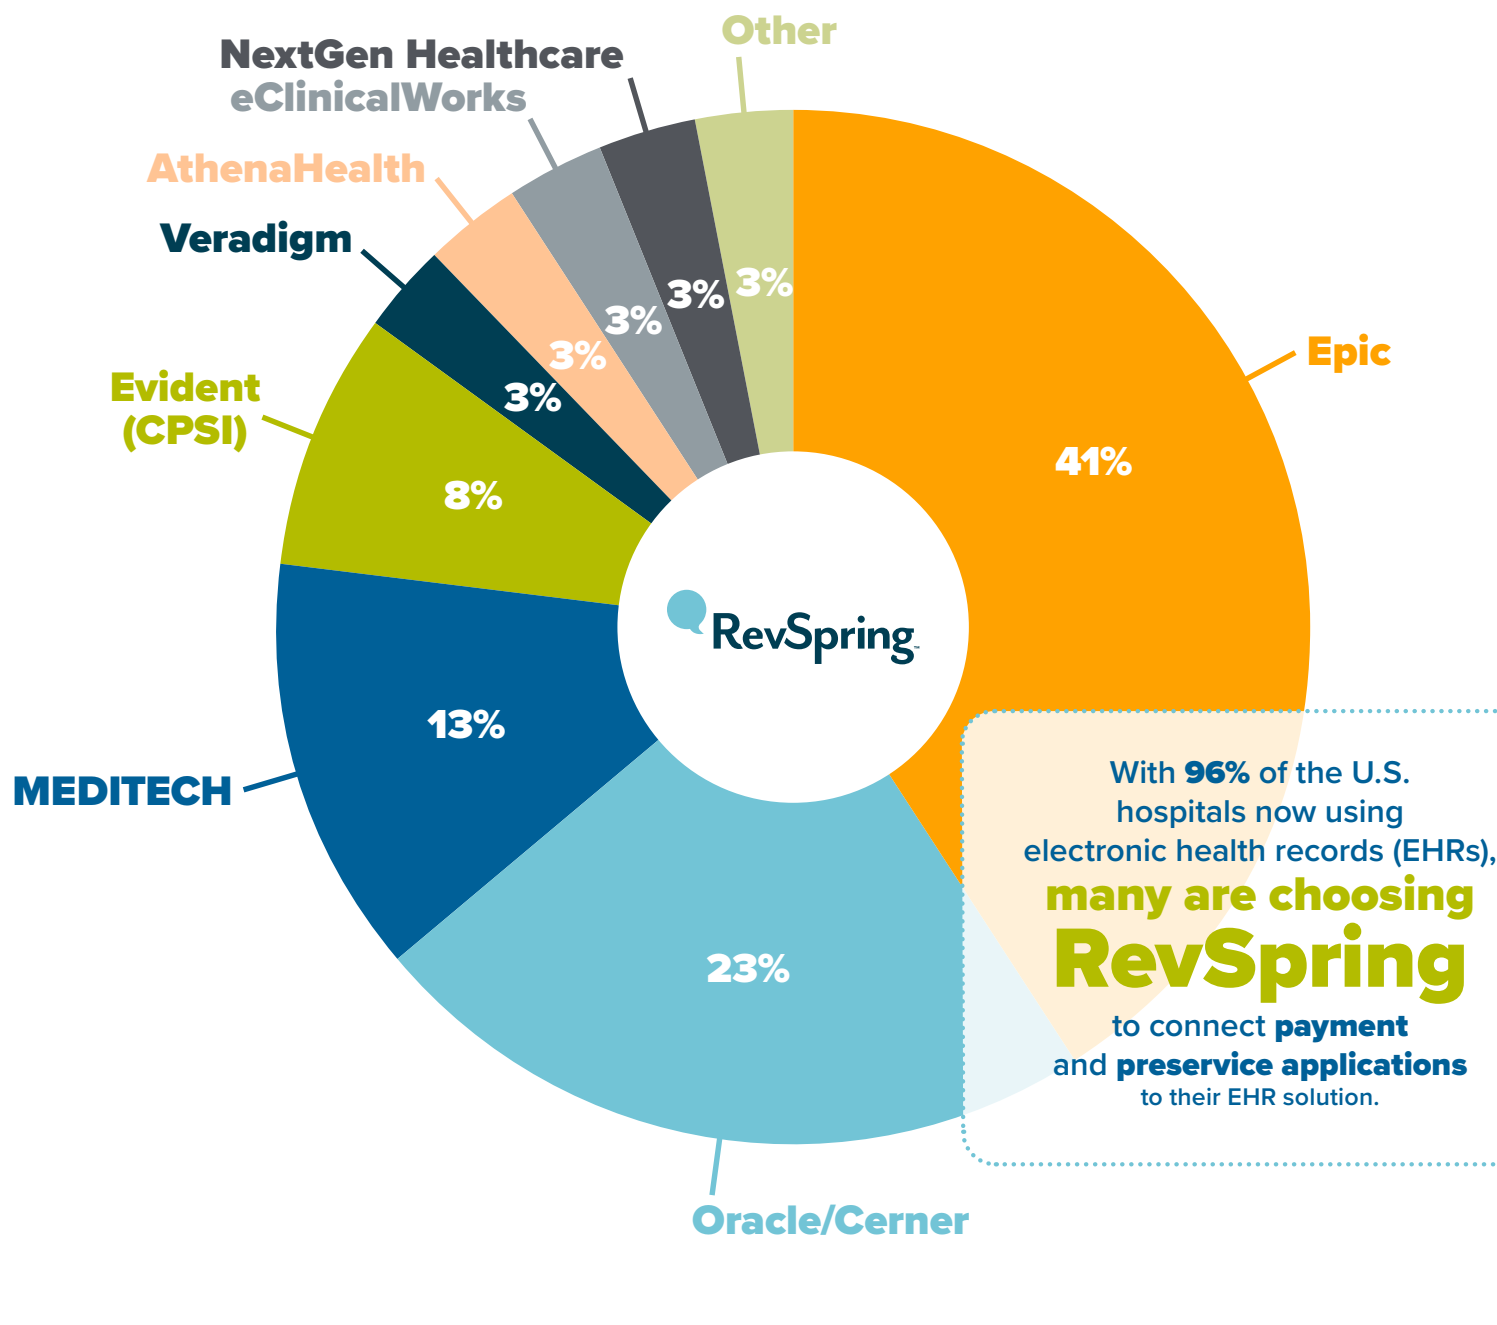

Integrating applications should **never** force you to abandon your already impressive investment in EHR/EMR system functionality!

Instead, all solutions should **enhance** your existing investments, making the integration process **quick and painless**.

RevSpring can help you integrate both with our best-of-breed products or our complete solution including:

Eight EHR companies comprise 97% of the market. We integrate with them ALL.

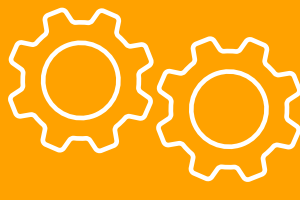

Integration

is the glue that makes best-of-breed connections possible

By integrating patient engagement, payment and IVR applications with your existing EHR platform, you can **reduce staff burden** and **delight patients**, many of whom prefer to self-serve. Integrations typically involve either APIs (application programming interfaces) or file-based, depending on system requirements.

What's the difference?

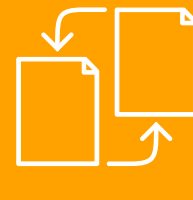

API-based integrations

Shares data on demand, allowing payment information, posting and appointment data all to happen **in real time**.

Transparently connects two systems, allowing for the transfer of **complex** and **voluminous** amounts of data.

Increases efficiency once the API code is completed. And APIs **eliminate the need to start from scratch** when new systems are needed to accommodate growing organizations.

Improves data accuracy by **eliminating** human interaction.

File-based integrations

Involves **source data** being represented in a file that is passed between **different** databases at **regular** intervals.

Often the best way to seamlessly connect a **best-of-breed** payment solution with a particular EHR system.

Allows providers to **avoid costly project upgrades or system replacements**. (Not all EHR systems have available APIs for integration, but most accept CSV files via a manual import process.)

Improves data accuracy by **reducing** human interaction.

But no matter which integration style works best with your EHR system,

insist that proven and secure processes also are in place.

RevSpring is committed

to healthcare system integrations, which is why we offer **multiple best-of-breed product integrations** with nearly every EHR and healthcare financial system in use today.

Seamless patient experience that encourages no-hassle self-service

Patient engagement using the **best communication methods** for each patient

Efficient processes that **reduce the burden** on staff

Elimination of data silos for a **connected & easy-to-understand** patient payment experience
